

HOBART offers guaranteed quality – of course also when it comes to the new HOBART combi steamers

For decades, the HOBART brand has been synonymous with innovative technology, premium quality and perfect service. Connoisseurs know: This does not only hold true for solutions in dishwasher technology, but also for combi steamers. From spring 2017, they will be available in a broad range comprising the models HOBART COMBI, HOBART COMBI-plus and Ecomax by HOBART ecocombi in different sizes.

If you want to accomplish great feats in the modern professional kitchen and at the same time work efficiently, you need technology you can wholeheartedly trust. Like that offered by HOBART. That is why chefs prefer this brand even for combi steamers, because these ovens are an important piece of equipment in every professional kitchen. This is why combi steamers should supply perfect cooked meals, offer easy and comprehensible handling, be equipped with fast and thorough cleaning programmes and on top of that contribute towards economic and efficient working routines in the kitchen. All this and much more is offered by the professional HOBART combi steamers. They are available in different sizes and models to guarantee that users will find the HOBART oven that perfectly matches their operations.

HOBART COMBI and HOBART COMBI-plus

Reliable, easy to handle and economic - that is what HOBART ovens offer in each and every case. Whether you choose HOBART COMBI or HOBART COMBI-plus is a matter of features and (special) functions. For instance, you can choose either the VisioPAD or the FastPAD to provide for intuitive handling. If an even, perfect cooking result is desired, the AirControl system, i.e.

an infinitely variable adjustment of the fan speed, will be your choice.

To ensure the combi steamer is ready for operation at any time, the HOBART appliances are equipped with extremely fast, fully automatic cleaning programmes. Three programme alternatives are available to choose from; requiring up to 50% less time than the solutions offered by other manufacturers. Because they are equipped with a self-contained cleaning system, water and detergent consumption is also very low. Apart from that, HOBART ovens are considered to operate in a particularly ecological and economic manner, because they also exhibit a comparatively low power consumption thanks to the CoreControl programme and the low connected loads.

ecocombi from ecomax by HOBART

Combi steamers are also available from the economically priced ecomax line by HOBART: regardless whether you require a capacity for 4, 6 or 10 1/1 GN or EN, the ecocombi appliances offer everything a professional combi steamer requires. Thanks to an excellent heat distribution and six fan speeds, the robust ovens make for consistently good cooking results. The basic touch display simplifies intuitive handling, alternatively by hand or by means of stored programmes. The five alternative water and detergent saving wash programmes provide for perfect cleanliness and ensure that the combi steamer is always quickly back in service again. The ecocombi appliances can be further upgraded with the smart upgrade pack. Thus, they can be optimally adapted to the changing conditions of your kitchen – this is easily accomplished on site by one of the experienced HOBART service technicians.

The reliable HOBART high pressure steam cooker completes the range that will be presented for the first time at the Internorga Hamburg, 17 to 21 March 2017, hall A4 stand 209.
